

reMYND is a clinical stage company developing treatments for Alzheimer's, Huntington's, epilepsy and other diseases caused by cellular dysfunction. reMYND's most advanced program is ReS19-T, an investigational compound for the treatment of Alzheimer's, ready to start Phase 2a.

Open Position: Research Associate

Your role:

Supporting the expansion of reMYND's animal work, entailing the following tasks:

- Observing and treating mice under study
- Performing behavioral studies, such as Morris Water Maze, Open field, Rotarod,... as well as histological or biochemical analyses, such as qPCR, ELISA, Western Analysis, ...
- Analyzing data and documenting findings
- Suggesting improvements in the methods and analyses
- Working in a team of equal minded colleagues under the supervision of a study-director
- Planning your own activities on a weekly basis in order to deliver the results
- Working occasionally a few hours over the weekends in a rotating scheme with other colleagues

Your background, skills and attitude:

- Holder of a **Bachelor** in biomedical laboratory technology, bio(-medical) sciences, biotechnology or equivalent
 - Felasa B certificate is **mandatroy!**
- Prior hands-on experience with in-vivo techniques, either in an academic or professional setting, and an understanding of the requirements of behavioral, histological and biochemical analyses
- Able to perform studies on mice under supervision, by accurately following standard study protocols
- An entrepreneurial, results oriented, outgoing attitude with a high level of energy; able to work closely in a team; eager to learn
- Familiar with MS Word and Excel
- Fluent in Dutch and English.
